Crop calendar:-

Month of planting (1 year)	Month of application of growth regulators in the II year	Months taken for flower induction	Harvesting month
April	March-April	1-2	October-November
May	April-May	1-2	November-December
August	July-August	1-2	February-March
September	August-September	1-2	March-April
October	September-October	1-2	April-May
November	October-November	1-2	May-June

Procedure: - Plant should have at least 35-40 leaves. Chemical preparation for 100 liters of solution required Sodium carbonate -40gm, Ethereal-6.25ml and Urea-2kg and dissolves it in 100 liters of water and stirred it properly. Apply 50 ml of solution per plant. Early morning or late evening is good for application of the chemical solution as to avoid evaporation of chemical due high temperature. 24-35 hours is required for completion of the staggering process. If rain in between, then repeat again the process. About 56 days time is required for initiation of the flowering in the plant.
